Making a Difference: The Consequences of Electoral Experiments Codebook

Tara Slough*

December 10, 2023

This codebook describes the variables in the original raw data and the processed datasets included in this replication package. Note that descriptions of the variables in the raw datasets used (electoral data) and replication datasets is available following the links in the README. All datasets described here are located in the results folder in the CodeOcean capsule unless otherwise noted.

studies_maei.csv

studies_maei.csv (located in data/raw/) contains one dataset necessary to construct Figure 1. The data consists of original back-of-the-envelope calculations described in Table A8. See Table C4 for a description of the variables.

colorado. Rdata

colorado. Rdata contains the four dataframes necessary to conduct the simulation reported in Figures 2-3 and A11. The dataframe dat contains panel data on electoral results in Colorado State House elections from 2010-2018 (see Table C1). The dataframe sh2016p contains precinct-level Colorado State House results from 2016 and registration data from 2018 (see Table C2). The dataframe ush2016p contains precinct-level US House results from 2016 and registration data from 2018 (see Table C3). The dataset indiv comes directly from Morris (2018).

pap_data.Rdata

pap_data.Rdata contains the dataframe trials with data from the EGAP and AEA registries. See Table C5 for description of variables.

gg.Rdata

gg.Rdata contains the dataframe gg_electoral, which contains the variables used in the Gerber and Green (2000) application. See Table C6 for description of variables.

bhm.Rdata

bhm. Rdata contains the dataframes bhm, bhm_n, and panel which contains replication data from Boas, Hidalgo, and Melo (2019) and relevant electoral data from Brazil's Tribunal Superior Eleitoral (TSE). The dataframe bhm comes directly from the Boas, Hidalgo, and Melo (2019) replication file, for which there is an existing codebook. See Table C7 for description of the variables in bhm_n and Table C8 for description of the variables in panel.

^{*}Assistant Professor, New York University

Variable	Description	Source	N	N Minimum Maximum	Maximum
year	Election year	CO Secretary of State	325	2010	2018
District	State House District Number	CO Secretary of State	325	1	65
DEM	Votes for Democratic Party candidate	CO Secretary of State	325	0	40,121
REP	Votes for Republican Party candidate	CO Secretary of State	325	0	40,011
total	Total two-party votes	CO Secretary of State	325	0	57,179
vote_marg	Votes for Democratic candidate - votes	Calculated from CO Secretary of State	325	-36,060	40,121
	for Republican candidate				
dem_marg	Proportion of registered Democrats -	Calculated from CO Secretary of State	325	-0.607	0.710
	proportion of registered Republicans				
	(active or inactive)				
Atotal	Number of active registered voters	CO Secretary of State	325	11,844	73,236
TOTAL	Number of registered voters	CO Secretary of State	325	16,702	81,775
vote_prop	Democratic margin of victory (or de-	CO Secretary of State	325	-0.733	0.592
	feat) as a share of registered voters				
	(vote_marg/TOTAL)				
lag	Lagged vote_prop	CO Secretary of State	260	-0.733	0.592

Table C1: Variables in the dat dataframe. N gives the number of non-missing observations.

Variable	Description	Source	N	N Minimum Maximum	Maximum
Precinct	Precinct Unique precinct identifier	CO Secretary of State	2,990		
Total	Total two-party votes	CO Secretary of State	2,990	0	2,354
REP	Votes for Republican Party candidate	CO Secretary of State	2,990	0	1,568
DEM	Votes for Democratic Party candidate	CO Secretary of State	2,990	0	1,748
District	State House District Number	CO Secretary of State	2,990	1	65
Year	Election year (2016)	CO Secretary of State	2,990	2016	2016
COUNTY	County in which precinct is located	CO Secretary of State	2,990		
ACTIVE.	Number of active registered voters	CO Secretary of State	1	4,693	73,236
	(2018)

b1	ratioxTOTAL (equivalent to DEM)	Calculated from CO Secretary of State	2,990	0	1,614
b2	(1-ratio)×TOTAL	Calculated from CO Secretary of State	2,990	-315	4,508

Table C3: Variables in the ush2016 dataframe. N gives the number of non-missing observations.

Variable	Description	Source	N	N Minimum Maximum	Maximum
Study	Index for number of studies (ranked by Original	Original		9	
	lower bound of average $MAEI_d$)				
lwr	Lower bound of average MAEI _d Original	Original	0.008	0.279	
	when $E[a_c(0)] = \frac{1}{2} \forall c$ if cluster-				
	randomized. $(E[a_c(0)] = 1$ if individ-				
	ually randomized.)				
lwr	Upper bound of average $MAEI_d$ when	Original	0.008	0.594	
	$E[a_c(0)] = 1 \forall c$ if cluster-randomized.				
	$(E[a_c(0)] = 1$ if individually random-				
	ized.)				
type	Indicates whether interval bounds the	Original			
	maximum or average $MAEI_d$.				
rand_type	Indicates whether treatment is assigned	Original			
	to individuals or clusters consisting of				
	> 1 voter.				

 $Table \ C4: \ Variables \ in \ the \ \texttt{studies_maei.csv} \ dataset. \ N \ gives \ the \ number \ of \ non-missing \ observations.$

Variable	Description	Source	N	Minimum	Maximum
Treatment	Classification of intervention	Original coding of EGAP and AEA registries	129		
Country	Country where intervention was conducted	EGAP and AEA registries	129		
Election	Type of election in which intervention was conducted	Original coding of EGAP and AEA registries	129		1
Office	Office targeted by intervention	Original coding of EGAP and AEA registries	129	1	1
Start	Start of intervention	EGAP and AEA registries	129		
IRB	Page number of discussion of IRB (if	Original coding of EGAP and AEA	63		
	pre-analysis plan accessible) or indication of IRB approval on the registry	registries			
Ethics_not_IRB	Page number of discussion of ethical considerations beyond IRB approval in	Original coding of EGAP and AEA registries	107		
	pre-analysis plan				
Outcomes	Indicator for discussion of aggregate	Original coding of EGAP and AEA	9	0	1
	electoral impact/election outcomes as	registries			
	an ethical concern among studies with ethics discussion				
dataset	Indicator for registry in which study was located. (Defaults to EGAP for	EGAP and AEA registries	129		
	cross-listed studies)				
Registered	Date registered in registry	EGAP and AEA registries	129	2012-10-12	2020-11-26
region	Region (continent) in which study was	EGAP and AEA registries	129		
trt	Classification of intervention	Original coding of EGAP and AEA	129		
		registries			
start_date	Date of start of intervention	EGAP and AEA registries	129	1998-10-31	2020-10-29
Уr	Year of start of intervention	EGAP and AEA registries	129	1998	2020
ns	Indicator for experiments conducted in	EGAP and AEA registries	129	0	1
	US
